Leeds Planning Ahead Report (End of Life)

The Electronic Palliative Care Coordination System (EPaCCS) is an electronic record that supports advance care planning conversations and improves the coordination of care for people approaching the end of life.

It provides a summary of key recommendations, preferences and information essential to the high quality care for patients with palliative care needs and those choosing to plan ahead, irrespective of prognosis. Local and national data shows that when patients are given the opportunity to discuss and share their preferences they are more likely to achieve their end of life care goals.

This is a 2024-25 (Q1-Q3) Leeds Planning Ahead Report report, combining SystmOne and EMIS data for patients registered from all the practices across Leeds.

To ensure a comprehensive view of advance care planning it collates EPaCCS data entered by all relevant care providers: Leeds Community Healthcare community services, hospice services, community palliative care teams in addition to primary care.

These Leeds Planning Ahead Report (End of Life) reports have been produced to enable you to reflect on end of life care in your practice.

Key findings of the 2024-25 Report (Q3) report are:

- ◆ **42%** of adults who died in Leeds had an EPaCCS record compared to previous year (45.9%).
(EPaCCS Deaths / All Deaths) 2024/25: Q1 (613/1411), Q2 (619/1354), Q3(672/1590)
(EPaCCS Deaths / All Deaths) 2023/24: Q1 (665/1444), Q2 (700/1411), Q3 (732/1574) and Q4 (691/1641)
- ◆ **78%** achieved their preferred place of death in current reporting period compared with the previous year of 80%; with 69% dying outside of hospital compared to 70.3% in the previous year.
- ◆ The proportion of patients whose EPaCCS record was started more than 3 month before they died is at 56% in current reporting period compared to 55% the previous year.
- ◆ The proportion of patients **without** an actual place of death recorded in current reporting period is **15%** compared to 14% in the previous year.
- ◆ Percentage of patients who died with GSF and also had a RESPECT Code recorded on the system:
2024/25: Q1 (97%), Q2 (95%), Q3 (97%)
2023/24: Q1 (92%), Q2 (91%), Q3 (94%) and Q4 (92%)
- ◆ Deaths at home recorded in the current reporting period :
2024/25: Q1 213 deaths (29%), Q2 191 deaths (31%), Q3 202 deaths (30%)
2023/24: Q1 213 deaths (32%), Q2 215 deaths (31%), Q3 210 deaths (29%) and Q4 175 deaths (25%)

This report covers a period of continued high demand across the health and social care environment on the system. It is a considerable achievement the proportion of patients being supported in their preferred place has been maintained along with the overall proportion of people with an EPaCCS record. This marks a sustained improvement on 2016-2017 when 33% of adults who died had an EPaCCS record.

The findings show that that a greater proportion of people are being given opportunities to discuss , document and share their care preferences at an earlier stage and demonstrate improved data quality.
